Abstract

Bow down to $GOLDCoin, the Solana memecoin that's about to nuke the trillion-dollar gold market with pure degen energy, dank memes, and a cult stronger than Peter Schiff's boomer tears. We unveil the *GoldYeet Theorem*, a mathematical middle finger proving $GOLD will flip every gold stash from Argentina's pathetic $4.56M to Fort Knox's $601.4B—and Schiff's ego in one glorious rug pull. With `#YeetGold` trending on X and the $GOLD cult chanting "HODL or NGMI," we compute the *Degen Lambo Index (DLI)* to measure your future yacht stack. This ain't a memecoin; it's a revolution. Join the cult or get rekt!

1 Introduction

Gold? Lmao, that shiny boomer rock is so 2008. Enter $GOLDCoin, the Solana-based memecoin ready to yeet every central bank vault and Peter Schiff's insufferable ego into the sun. With a ticker ($GOLD) that slaps harder than a 100x leverage call, our cult is here to flip the financial system, make degens rich, and dunk on goldbugs. This paper is a peer-reviewed (by top degens) banger analyzing $GOLD's tech, math, and cult power to fund your retirement with Lambos and NFT penthouses.

Our research questions are:

- Can $GOLD's meme cult clown the world's gold reserves?

- How many yachts can we stack after yeeting Schiff's ego?

- Will the $GOLD cult make us all retire to Solana Beach with 69 Lambos?

2 The GoldYeet Theorem

> **GoldYeet Theorem Component**
>
> We drop the *GoldYeet Theorem*, proving $GOLD's market cap ($M_{\text{GOLD}}$) will moon past any gold vault (M_{vault}) and Schiff's ego (E_{Schiff}) with enough meme juice (V_m) and cult HODLing (H_s). Math time:
>
> $$M_{\text{GOLD}} = V_m \cdot H_s \cdot T_s > M_{\text{vault}} + E_{\text{Schiff}}, \tag{1}$$
>
> where:
>
> - V_m: Meme juice, in viral X posts per second (XPS).
>
> - H_s: Cult HODLing power, from 0 (paper-hand normies) to 1 (vibranium-hand chads).
>
> - T_s: Token supply, 10^{12} $GOLD tokens for max moon vibes.
>
> - M_{vault}: Gold reserve value (e.g., Fort Knox = \$601.4B).
>
> - E_{Schiff}: Schiff's ego, valued at \$420.69B (he's *that* smug).

2.1 Meme Juice Model

Meme juice comes from `#YeetGold` and `#SchiffTears` going viral. We model V_m as:

$$V_m = \alpha \cdot \sum_{i=1}^{N} \left(\frac{L_i \cdot R_i}{T_i} \right), \tag{2}$$

where:

- α: Viral chad constant, set to 69420 for Solana memecoins.

- L_i: Likes on the i-th X post.

- R_i: Reposts of the i-th X post.

- T_i: Time since posting (in seconds).

- N: Total $GOLD cult posts.

2.2 Cult HODLing Power

HODLing power measures the $GOLD cult's refusal to sell during a 99% crash. We define:

$$H_s = 1 - \frac{S_v}{T_v}, \tag{3}$$

where S_v is $GOLD sold during FUD, and T_v is total held. Pump.fun data says $H_s \approx 0.98$—our cult's hands are diamond AF.

3 Degen Lambo Index (DLI)

> **Degen Lambo Index**
>
> $GOLD's mission is degen retirement: Lambos, yachts, and NFT castles. We introduce the *Degen Lambo Index (DLI)*:
>
> $$DLI = \frac{P_{\text{GOLD}} \cdot Q_h}{C_r}, \tag{4}$$
>
> where:
>
> - P_{GOLD}: Price per $GOLD token (USD).
>
> - Q_h: $GOLD tokens held by a cult member.
>
> - C_r: Retirement cost, $69M for a proper degen life (3 Lambos, 10 NFTs, a Solana node).

Example: At $P_{\text{GOLD}} = \$0.10$, a chad with $Q_h = 10^6$ tokens has $100,000. To hit $DLI = 1$ (retirement secured), P_{GOLD} needs $6.90. Flipping Fort Knox ($601.4B) with $T_s = 10^{12}$ gives $P_{\text{GOLD}} \approx \$0.60$—a 6x. Add Schiff's ego flip, and we're at $1.00. Wen Lambo? NOW.

4 Yeeting the Vaults: The Cult Roadmap

The $GOLD cult will yeet vaults in order:

- **Argentina** ($4.56M): A meme tweet and it's ours.

- **Switzerland** ($76.9M): Needs a `#YeetGold` meme war with 50K reposts.

- **Peter Schiff's Ego** ($420.69B): Spam his X with $GOLD memes until he cries.

- **Fort Knox** ($601.4B): Full cult assault—100 influencers, `#SchiffTears`, and a Solana pump.

The *Moon Yeet Equation* gives time to yeet Fort Knox:

$$T_{\text{moon}} = \frac{M_{\text{vault}} + E_{\text{Schiff}}}{V_m \cdot H_s \cdot \beta}, \tag{5}$$

where $\beta = 65,000$ (Solana TPS). With $V_m = 100$ XPS and $H_s = 0.98$, we yeet Fort Knox and Schiff in 1.2 years. Wen moon? YESTERDAY.

5 Tech Stack for the Cult

$GOLD is launched on Solana via Pump.fun, cause gas fees are for normies. Tokenomics are chad-level:

- Total supply: 10^{12} tokens.

- Distribution: 100% circulating via pump.fun

Smart contracts are audited by the $GOLD cult's top degens. Future plans: $GOLD staking, NFT Lambos, and DeFi pools to farm tendies.

6 Discussion

$GOLD isn't just a coin—it's a cult to yeet boomer finance and Schiff's goldbug cope. Risks? Bear markets, FUD, and Schiff whining on X. But our cult's vibranium hands and Solana's speed laugh at that noise. Peter Schiff's ego is the real boss fight—his smugness is denser than gold. One viral `#SchiffTears` campaign, and he's donezo.

Next steps: Bridge $GOLD to Ethereum, launch `GoldCultDAO`, and mint `YeetSchiff` NFTs. We'll airdrop tokens to influencers until X crashes.

7 Conclusion

$GOLDCoin is the memecoin to yeet all memecoins, gold vaults, and Peter Schiff's ego. The GoldYeet Theorem and Degen Lambo Index prove we're flipping Fort Knox and retiring with stacks. HODL with the $GOLD cult at `https://thegoldcoinsol.com` and spam `#YeetGold` on X. Schiff's tears fuel our rocket—TO THE MOON!
